

CREATING VALUE. REDUCING COSTS.

NATIONWIDE, EVERY DAY.

Innovative Power
Solutions

POWERED BY INNOVATION

Since 2003 Innovative Power Solutions has delivered turnkey electrical contracting and energy management solutions to commercial, industrial and governmental clients nationwide. Built on industry-leading expertise in comprehensive energy management plans, IPS today delivers proven results through divisions focused on construction, energy audits and management, data, security and communications, and service and maintenance.

From new construction to retrofit to energy-focused projects, Innovative Power Solutions excels in maximizing rebates and total project management—guiding you through each step of the process and exceeding expectations all the way.

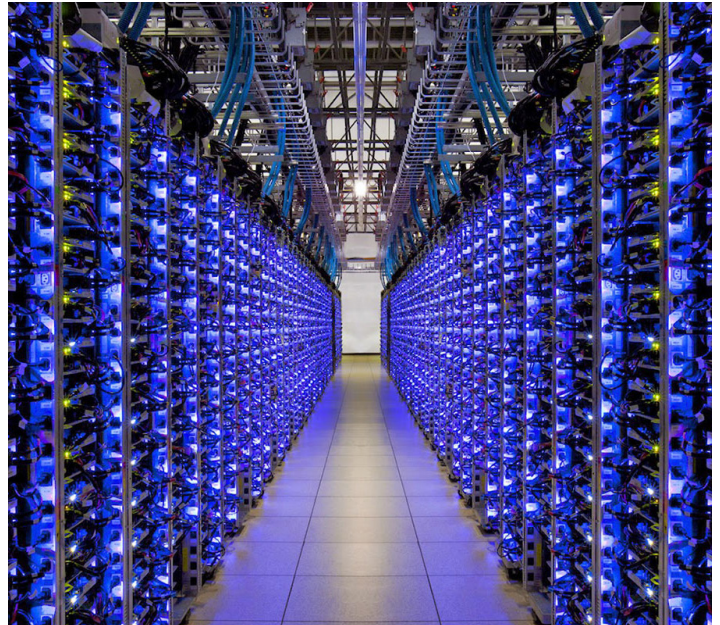

NATIONWIDE LICENSING AND PERFORMANCE

IPS completes projects throughout the contiguous United States and is licensed as a master electrical contractor in 33 states; licenses for energy optimization allow us to operate nationwide. IPS maintains bonding capacity up to \$20 million.

ENTERPRISE SERVICE DELIVERY

Innovative Power Solutions is built to serve the most demanding enterprises and projects, from the single location to large multi-facility complexes and campuses. Successfully completed projects include industrial, higher education, manufacturing and office/retail projects from coast to coast. A good example is the energy retrofitting of more than 150 Dillard's department stores across the U.S. IPS' enterprise capability is built on the shoulders of an experienced leadership team bringing more than 150 years combined electrical contracting experience to the table.

EXPERTS AT YOUR SERVICE

IPS is led by electrical industry veterans, each with 20 and 30 years or more experience in the business. Our senior team holds master electrician licenses in more than 25 states across the U.S. and multiple certifications from the industry's governing bodies. A former architect oversees our energy services division and our head of project delivery has developed and overseen project budgets up to \$500 million.

ENERGY EFFICIENCY SOLUTIONS DIVISION

IPS is recognized as a national leader in large-scale energy efficiency management programs—delivering end-to-end services from comprehensive audits and energy management plans to turnkey installation and maintenance. Staying on the cutting edge of technology, we have implemented multiple programs delivering extreme ROI—with aggressive payback periods.

CONSTRUCTION DIVISION

IPS is a full-service electrical contractor offering complete services to industrial, commercial, institutional and government clientele. The success of any construction project is dependent largely on a feasible, sensible and effective game plan—and this is one area in which IPS excels. This begins in the preconstruction planning, scheduling and coordination phase, and is carried out with qualified personnel closely monitoring these essential components throughout the duration of the project. No one knows a project as well as the team who prepared the estimate and schedule; our clients enjoy the benefit of working with the same project team from preconstruction to project closeout—a seamless process from conception to completion.

MAINTENANCE DIVISION

Keeping your electrical facilities in ship-shape is paramount to maximizing productivity, user experience and uptime. Dozens of satisfied clients can vouch that in this regard IPS delivers—from simple troubleshooting calls to complete remodels, new construction projects and design-build projects. Our objective is to exceed expectations, completing any job from emergency repairs to routine maintenance, promptly, efficiently and at minimal expense.

DATA, SECURITY AND COMMUNICATIONS DIVISION

Besides electricity itself, data and communications have become the lifeblood of business today. IPS brings its extensive experience to bear on designing, building and maintaining modern, efficient and reliable systems that keep your business running optimally. We provide structured cabling, fiber optics, access control, telecommunication systems, wireless applications and camera systems installed and maintained by BICSI-certified technicians. Whether it's an entirely new network, network upgrade, or monitoring and maintenance, our Data, Security and Communications Division provides the consultation and support services necessary to keep your operation humming.
